

Distribution liability: The data represents the results of data collection processing by a specific US Army Corps of Engineers active and routine processing of the general existing conditions. As such, the user is responsible for the results of any application of the data for other than its intended purpose.

Data Conventions: Hydrographic data is subject to change rapidly due to several factors including but not limited to dredging activities and natural shoaling and scouring processes. The user is responsible for the results of any application of the data for other than its intended purpose.

Data Use: This data is intended for U.S. Army Corps of Engineers internal use. Plaintiff statements should not rely upon it.

MISSISSIPPI RIVER - B.R. TO GULF
REDEYE CROSSING
MD_04_RED_20220301_CS
01 March 2022

The location of navigation aids are base on and provided by the U.S. Coast Guard and USACE crew.

2015 Aerial Photography data source: NAIP, USDA-FSA-APFO Aerial Photography Field Office.

Reference is N.O.A.A. Navigation Chart No. 11370.

** Shoalest Sounding per Quarter per Reach.

*** High frequency (20 kHz) survey data represents the first signal return at a sounding location and will include suspended solids, known as "fluff", if present. Low frequency (20 kHz) survey data normally penetrates through this "fluff" layer to depict elevations of consolidated bottom material. Low frequency accuracies may vary depending on channel conditions and fathometer settings.
