of Engineers
District: CEMVN

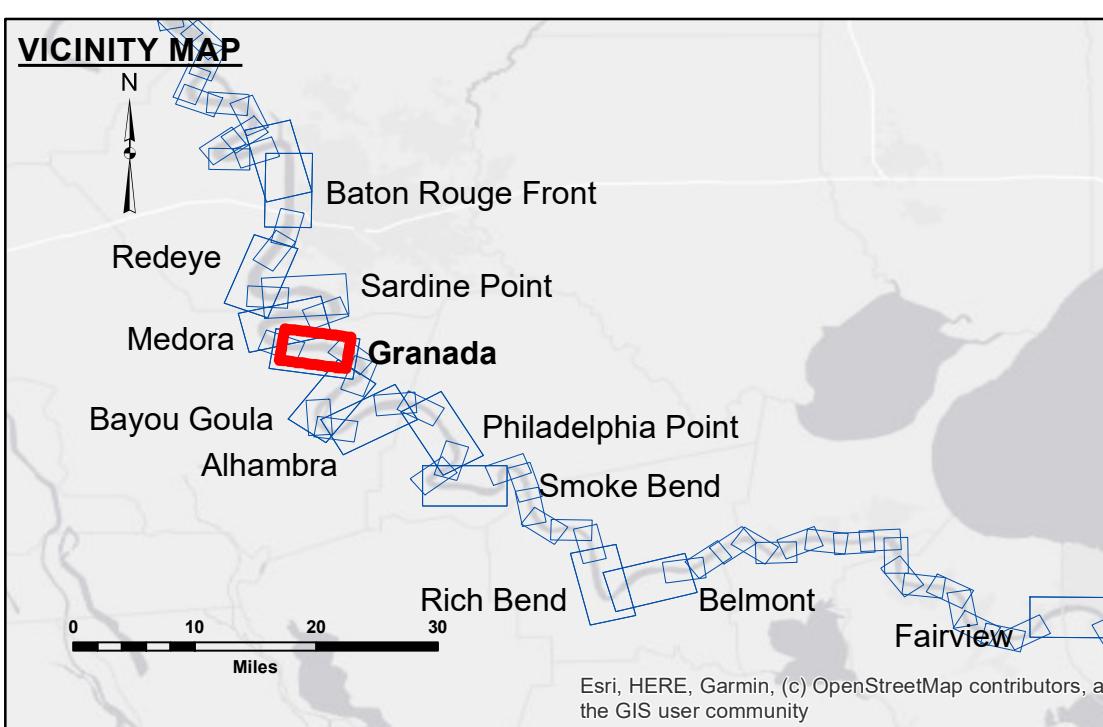

DISCLAIMER
Access Conditions: The United States Government furnishes the data and the recipient accepts and uses them with the express understanding that the U.S. Government makes no warranties, representations, or guarantees as to the quality, accuracy, reliability, or timeliness of the data furnished. The United States shall be under no liability whatsoever in respect to damages, errors, or omissions in the data furnished. Any use of the data furnished by the recipient fully agrees not to represent these data to anyone as other than the Government provided data. The recipient may not transfer these data on without so transferring this Disclaimer.

Distribution Liability: The data represents the results of data collection/processing by a specific US Army Corps of Engineers activity and indicates the general existing conditions. As such, the user is responsible for the results of its application of the data to other than its intended purpose.

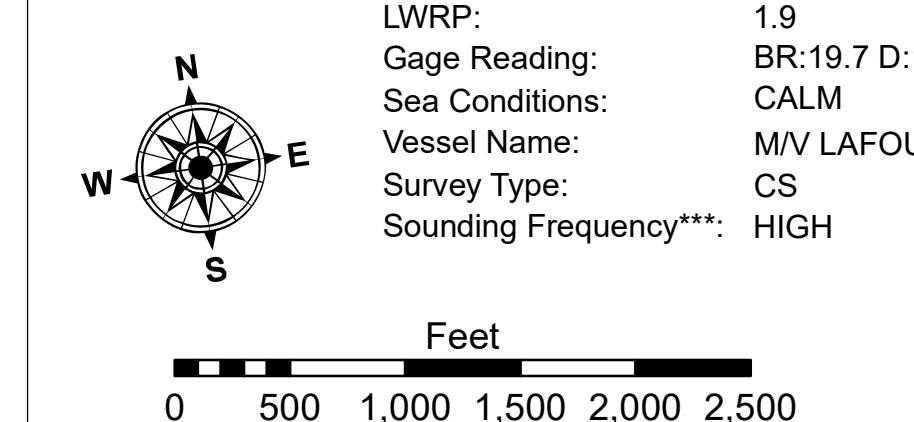

Data Constraints: Hydrographic survey data is subject to change rapidly due to several factors including but not limited to dredging operations, subsidence, and coastal erosion. The U.S. Army Corps of Engineers does not guarantee the data to be current after the date of publication. This data is intended for U.S. Army Corps of Engineers internal use. Private materials should not be used.

	● Shoalest Sounding**

NOTES:

Horizontal Coordinate System:
North American Datum of 1983 (NAD83), projected to the State Plane Coordinate System (SPCS), Louisiana South Zone. Distance units in U.S. Survey Feet.

Vertical Datum:
Soundings are shown in feet and indicate depths below Low Water Reference Plane 2007 (NAVD). Distances on the Mississippi River, above and below Head of Passes are shown at 1 mile intervals.

The location of navigation aids are base on and provided by the U.S. Coast Guard and USACE crew.
2015 Aerial Photography data source: NAIP, USDA-FSA-APOF Aerial Photography Field Office.
Reference is N.O.A.A. Navigation Chart No. 11370.

** Shoalest Sounding per Quarter per Reach.

*** High frequency (200 kHz) survey data represents the first signal return at a sounding location and will include suspended solids, known as "fluff", if present. Low frequency (20 kHz) survey data normally penetrates through this "fluff" layer to depict elevations of consolidated bottom material. Low frequency accuracies may vary depending on channel conditions and fathometer settings.
