

Distribution liability: The data represents the results of data collection processing of a specific US Army Corps of Engineers activity and includes the general existing conditions as such. The United States Government makes no warranty, express or implied, regarding the accuracy, reliability, or completeness of the data furnished. The United States shall be under no liability whatsoever for any use made of the data furnished. The user is responsible for the results of any application of the data for other than its intended purpose.

Data Conventions: Hydrographic survey data is subject to change rapidly due to several factors including but not limited to dredging activity and natural erosion and accretion processes. The U.S. Army Corps of Engineers and the State of Louisiana accept no responsibility for the use of this data. The user agrees to indemnify the Government provided data to anyone who may suffer damages as a result of using this data. The information depicted on this map represents the results of a survey conducted on the date indicated and can only be considered to depict the general condition existing at that time.

MISSISSIPPI RIVER - B.R. TO GULF
ALHAMBRA CROSSING
MD_16_ALH_20210918_CS
18 September 2021

NOTES:

Horizontal Coordinate System:
North American Datum of 1983 (NAD83), projected to the State Plane
Coordinate System (SPCS), Louisiana South Zone. Distance units in U.S. Survey Feet.

Vertical Datum:
Soundings are shown in feet and indicate depths below Low Water Reference Plane 2007 (NAVD).
Distances on the Mississippi River, above and below Head of Passes are shown
at 1 mile intervals.

The location of navigation aids are base on and provided by the U.S. Coast Guard and USACE crew.

2015 Aerial Photography data source: NAIP, USDA-FSA-AFPO Aerial Photography Field Office.

Reference is N.O.A.A. Navigation Chart No. 11370.

** Shoalest Sounding per Quarter per Reach.

*** High frequency (20 kHz) survey data represents the first signal return at a sounding
location and will include suspended solids, known as "fluff", if present. Low frequency (20 kHz)
survey data normally penetrates through this "fluff" layer to depict elevations of consolidated bottom
material. Low frequency accuracies may vary depending on channel conditions and fathometer
settings.
