

**Accession:** The United States Government furnishes these data and the recipient accepts and uses them with the express understanding that the data are not to be used for any purpose other than that for which they were originally prepared, and that the recipient shall not be held liable for any error or omission in the data or for any use of the data for any purpose other than that for which they were originally prepared.

**Accuracy:** The data were collected using a surveying instrument with a stated accuracy of 1:50,000. The user is responsible for the accuracy of the data for any purpose other than that for which they were originally prepared.

**Disclaimer:** The data are provided for informational purposes only. The recipient may not transfer these data to others without the written consent of the U.S. Army Corps of Engineers. The recipient may not use these data for any purpose other than that for which they were originally prepared. The recipient shall not be held liable for any error or omission in the data or for any use of the data for any purpose other than that for which they were originally prepared.

**NOTES:**

Horizontal Coordinate System:  
North American Datum of 1983 (NAD83), projected to the State Plane Coordinate System (SPCS), Louisiana South Zone. Distance units in U.S. Survey Feet.

Vertical Datum:  
Soundings are shown in feet and indicate depths below Low Water Reference Plane 2007 (NAVD).  
Distances on the Mississippi River, above and below Head of Passes are shown at 1 mile intervals.

The location of navigation aids are based on and provided by the U.S. Coast Guard and USACE crew.  
2015 Aerial Photography data source: NAIP, USDA-FSA-APFO Aerial Photography Field Office.

Reference is N.O.A.A. Navigation Chart No. 11370.  
\*\* Shoalest Sounding per Quarter per Reach.

\*\*\* High frequency (200 kHz) survey data represents the first signal return at a sounding location and will include suspended solids, known as "fluff", if present. Low frequency (20 kHz) survey data normally penetrates through this "fluff" layer to depict elevations of consolidated bottom material. Low frequency accuracies may vary depending on channel conditions and bathymeter settings.
