

The location of navigation aids are base on and provided by the U.S. Coast Guard and USACE crew.
2010 Aerial Photography data source: NAIP, USDA-FSA-APFO Aerial Photography Field Office.
Reference is N.O.A.A. Navigation Chart No. 11370.
** Shoalest Sounding per Quarter per Reach.
*** High frequency (200 kHz) survey data represents the first signal return at a sounding location and will include suspended solids, known as "fluff", if present. Low frequency (20 kHz) survey data normally penetrates through this "fluff" layer to depict elevations of consolidated bottom material. Low frequency accuracies may vary depending on channel conditions and fathometer settings.

Distribution Liability: The data represents the results of data collection and processing of a specific US Army Corps of Engineers activity and includes the general existing conditions as such. The United States Government makes no warranty and assumes no liability for the accuracy or completeness of the data or for damages resulting from its use. The user is responsible for the results of any use of the data and for any damages caused by such use. Data Constraints: Hydrographic survey data is subject to change rapidly due to several factors including but not limited to dredging activities, new channel alignments and changes in the hydrographical conditions which develop after the date of publication. This data is intended for U.S. Army Corps of Engineers internal use. Private users should not rely upon it.
