Detailed description: This map shows a section of the Mississippi River with various river bends and points labeled. A red square highlights the area around Philadelphia Point. The river flows generally from north to south. Key locations shown include Baton Rouge Front, Redeye, Medora, Granada, Bayou Goula, Alhambra, Philadelphia Point (highlighted), Smoke Bend, Rich Bend, Belmont, and Fairview. A north arrow is present, and a scale bar indicates distances up to 30 miles.

Survey Type:	CONDITION
Sounding Frequency***:	HIGH

A scatter plot titled "Sounding Frequency" on the y-axis and "Distance from Wellhead (Feet)" on the x-axis. The x-axis ranges from 0 to 2,500 feet with major tick marks every 500 feet. The y-axis has four categories: 0-250, 251-500, 501-750, and >750. Data points are represented by small black dots. A legend at the bottom left shows a white square with a black border labeled "0-250", a white square with a black dot labeled "251-500", a white square with a black cross labeled "501-750", and a white square with a black asterisk labeled ">750".

Distance Range (Feet)	Sounding Frequency
0-250	~10
251-500	~10
501-750	~10
>750	~10

OTES:

Horizontal Coordinate System:
North American Datum of 1983 (NAD83), projected to the State Plane
Coordinate System (SPCS) based on the North American Datum of 1983.

Coordinate System (SPCS), Louisiana South Zone. Distance units in U.S. Survey Feet.
Vertical Datum:
Elevations are shown in feet and indicate depths below Low Water Reference Plane 2007 (NGVD).
Distances on the Mississippi River, above and below Head of Passes are shown

The location of navigation aids are base on and provided by the U.S. Coast Guard and USACE crew.

0 Aerial Photography data source: NAIP, USDA-FSA-A

Shoalest Sounding per Quarter per Reach.

High frequency (200 kHz) survey data represents the first signal return at a sounding station and will include suspended solids, known as "fluff", if present. Low frequency (20 kHz) survey data normally penetrates through this "fluff" layer to depict elevations of consolidated bottom material. Low frequency accuracies may vary depending on channel conditions and fathometer settings.
