Geography data source: Natural Earth

D.A.A. Navigation Chart No. 11353.

frequency (200 kHz) survey data represents the first signal return at a sounding. It may include suspended solids, known as "fluff", if present. Low frequency (20 kHz) generally penetrates through this "fluff" layer to depict elevations of consolidated bottom. Frequency accuracies may vary depending on channel conditions and fathometer settings.
