

Distribution Liability: The data represents the results of data collection/processing for a specific US Army Corps of Engineers activity and should not be used for general navigation purposes. The user is responsible for the results of any application of the data to other than its intended purpose.

Data Constraints: Hydrographic survey data is subject to change rapidly due to several factors including burial, shifts in dredging activities, changes in river channel, and changes in the hydrographic conditions which develop after the date of publication. The data is intended for Army Corps of Engineers use only. The data may not be used for general navigation purposes.

Disclaimer: The information depicted on this map represents the results of a survey conducted on the date indicated and can only be considered b reproducible in the general condition existing at the time.

MISSISSIPPI RIVER - B.R. TO GULF
SOUTHWEST PASS - SHEET 2
SW_02_SWP_20230925_CS_B2B
25 September 2023

Sheet Reference Number
2 of 13

Revision Number:
42-200420

** Shoalest Sounding per Quarter per Reach.
*** High frequency (200 kHz) survey data represents the first signal return at a sounding location and will include suspended solids, known as "fluff", if present. Low frequency (24 kHz) survey data normally penetrates through this "fluff" layer to depict elevations of consolidated bottom material. Low frequency accuracies may vary depending on channel conditions and fathometer settings.
