\*\* Shoalest Sounding per Quarter per Reach.  
 \*\*\* High frequency (200 kHz) survey data represents the first signal return at a sounding location and will include suspended solids, known as "fluff", if present. Low frequency (24 kHz) survey data normally penetrates through this "fluff" layer to depict elevations of consolidated bottom material. Low frequency accuracies may vary depending on channel conditions and fathometer settings.

This map represents the results of data collection/processing for a specific U.S. Army Corps of Engineers activity and provides the general existing condition. Such activities may take place at any time. The user is responsible for the results of any application of the data to other than its intended purpose.
