** Shoalest Sounding per Quarter per Reach.

*** High frequency (200 kHz) survey data represents the first signal return at a sounding location and will include suspended solids, known as "fluff", if present. Low frequency (24 kHz) survey data normally penetrates through this "fluff" layer to depict elevations of consolidated bottom material. Low frequency accuracies may vary depending on channel conditions and fathometer settings.

DISTRIBUTION LIABILITY The data represents the results of data collection/processing for a specific U.S. Army Corps of Engineers activity and/or product. The general existing condition of such activities and/or products is not guaranteed. As such, the user is responsible for the results of any application of the data to other than its intended purpose.

DATA CONSTRAINTS Hydrographic survey data is subject to change rapidly due to several factors including but not limited to dredging, Army Corps of Engineers actions as well as changes in the hydrographic conditions which develop after the date of publication. This data is intended for U.S. Army Corps of Engineers internal use. Public release of this data is not intended.
