** Shoalest Sounding per Quarter per Reach

Chances of Scoring per Quarter per Reach:

*** High frequency (200 kHz) survey data represents the first signal return at a sounding location and will include suspended solids known as "fluff", if present. Low frequency (

location and will include suspended soils, known as "fluff", if present. Low frequency survey data normally penetrates through this "fluff" layer to depict elevations of consolidated soil.

material. Low frequency accuracies may vary depending on channel conditions and fat settings.
