NOTES:  
Horizontal Coordinate System: North American Datum of 1983 (NAD83), projected to the State Plane Coordinate System (SPCS), Louisiana South Zone. Distance units in U.S. Survey Feet.  
Datum Relationships for gage 01545 as of July 2015:  
0.0' NAVD88 = -0.18' MLLW = 3.32' MLG  
Distances on the Mississippi River, above and below Head of Passes are shown at 1 mile intervals.  
The location of navigation aids are base on and provided by the U.S. Coast Guard.  
2016 Aerial Photography data source: Precision Aerial Reconnaissance, LLC (1998 DOQQ in green)  
Reference is N.O.A.A. Navigation Chart No. 11361.  
\*\* Shoalest Sounding per Quarter per Reach.

\*\*\* High frequency (200 kHz) survey data represents the first signal return at a sounding location and will include suspended solids, known as "fluff", if present. Low frequency (24 kHz) survey data normally penetrates through this "fluff" layer to depict elevations of consolidated bottom material. Low frequency accuracies may vary depending on channel conditions and fathometer settings.

DISCLAIMER: The data represents the results of data distribution liability. The data represents the results of data collection processing of a specific US Army Corps of Engineers survey and reflects the general existing conditions as such. Accuracy is not guaranteed. The user is responsible for the results of any use of the data for other than its intended purpose. Data Constraints: Hydrographic data is subject to change rapidly due to several factors including but not limited to dredging operations, riverbank erosion, subsidence, or changes in the hydrographic conditions which develop after the date of publication. The user is responsible for keeping the data current and up-to-date. The information depicted on this map represents the results of a survey conducted on the date indicated and can only be considered reliable within the period of time during which the survey was conducted.
