Feet

Soundings are shown in feet and indicate depths below Mean Lower Low Water (MLLW, 12-16).
Datum Relationships for gage 01545 as of March 2020:
0.0' NAVD88, 2009.55 = -0.32' MLLW = 3.18' MLG

Distances on the Mississippi River, above and below Head of Passes are shown at 1 mile intervals.

The location of navigation aids are base on and provided by the U.S. Coast Guard.

** Shoalest Sounding per Quarter per Reach.

*** High frequency (200 kHz) survey data represents the first signal return at a sounding location and will include suspended solids, known as "fluff", if present. Low frequency (24 kHz) survey data normally penetrates through this "fluff" layer to depict elevations of consolidated bottom material. Low frequency accuracies may vary depending on channel conditions and fathometer settings.

Distribution liability: The data represents the results of data collection and processing by a specific Army Corps of Engineers activity and reflects the general existing conditions. Such data is not necessarily suitable for any particular purpose. The user is responsible for the results of any application of the data for other than its intended purpose.

Data Constraints: Hydrographic survey data is subject to change due to several factors including but not limited to dredging operations, subsidence, or changes in the hydrographical conditions which develop after the date of publication. This data is intended for U.S. Army Corps of Engineers use only and must be used under the terms and conditions of the license agreement.

The information depicted on this map represents the results of a survey conducted on the date indicated and can only be considered to be valid for the period of time indicated.

This information is not to be used for any other purpose than the original intent of the surveyor.
