 \*\* Shoalest Sounding per Quarter per Reach.  
 \*\*\* High frequency (200 kHz) survey data represents the first signal return at a sounding location and will include suspended solids, known as "fluff", if present. Low frequency (24 kHz) survey data normally penetrates through this "fluff" layer to depict elevations of consolidated bottom material. Low frequency accuracies may vary depending on channel conditions and fathometer settings.

The recipient may not transfer these data to others without also transferring this disclaimer. The information depicted on the map represents the results of a hydrographic survey conducted on the date of the survey. The hydrographic conditions which develop after the date of the survey are not represented on the map. Product names should not be used to represent the general condition existing at that time.
